

**GRC Conference Facility Tour**  
**Tuesday, September 19, 2017 1:00-5:00 PM**  
**\$25.00 Transportation Provided**

**Federal Law Enforcement Training Center (FLETC-Glynco, GA):**

A paradigm shift in thinking began in earnest in November 2013, when the FLETC's Assets and Logistics Management Division (ALM) in collaboration with the Firearms Division (FAD) and the FLETC Sustainability Officer initiated a pilot recycling project on two firearms ranges. Until then, these ranges disposed of the paper targets, cardboard target backers, plastic ammunition trays and paperboard ammunition boxes as solid waste. These items were carried by students to dumpsters at the end of a training period causing a loss in training time. As the program has matured, The FLETC in its continuing efforts to be a good community partner, has signed a memorandum of Understanding with the **Brunswick Job Corps Training Center** to provide a learning opportunity to Job Corps Trainees who have an interest in the field of sustainability and the recycling industry. Visit the facility and see comprehensive recycling & job training in action.

**Golden Isles Conservation Center:**

The Golden Isles Conservation Center is located in **Nahunta, Ga.** and is part of Seven Islands Environmental Solutions, a subsidiary of Cox Enterprises. The Center utilizes an eco-friendly process to remove materials from the waste stream and repurpose them for extended usage. The Center has the capability of removing the equivalent of five tons of tires daily from landfills and waterways. The initial focus is on recycling tires. A front-end system utilizes organic materials, wood chips & plywood scraps to generate heat. The heat breaks down tires into their three original components – synthesis oil, carbon black and synthesis gas – while producing NO harmful emissions. The synthesis oil and carbon black will be repurposed for many uses, including the creation of filtration systems, rubber hoses and inks, among others. The synthesis gas will generate energy for the closed-loop Center and will be fed back into the grid, creating clean energy for the community. A very special opportunity to see this unique operation!
